Project Team Information Document

1. Team Introduction

Team Name: Stack Architects

Team Logo:

2. Team Lead

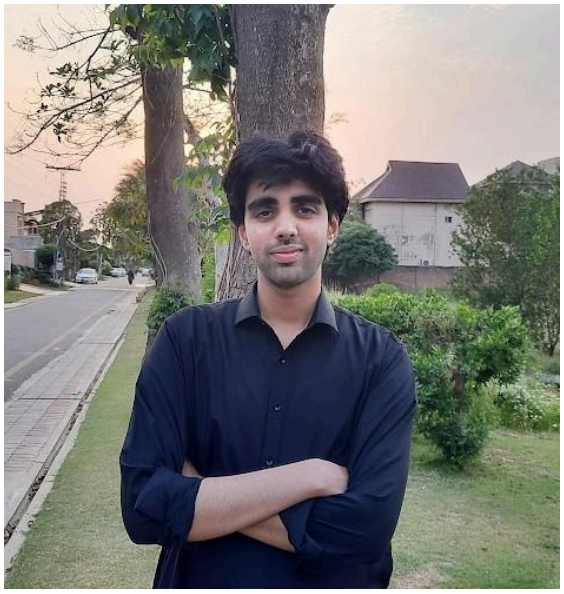

Team Lead: Ali Bin Salman

3. Team Members Introduction

👤 Member 1

Name: Ali Bin Salman
Role(s): Project Manager, Requirement Analyst, Developer
GitHub Username: AliSalman909

Picture:

Professional Biography :
I am an intuitive and results-driven 8th-semester BS Computer Science student at FAST NUCES, passionate about building intelligent and efficient technology solutions. I possess strong skills in both frontend and backend development, along with solid expertise in algorithmic problem solving. My technical experience includes C, C++, C#, Java, Python, JavaScript, and SQL, with hands-on work in Java Swing, .NET, robotics, AI, and high-performance computing. I have also worked in Generative AI and NLP, developing models to address real-world challenges and deliver impactful solutions.

👤 Member 2

Name: Muhammad Rohaan
Role(s): Developer, Scrum Master , Architect
GitHub Username: m.rohaan28

Picture:

Professional Biography :
I am a highly motivated 8th-semester BS Computer Science student at FAST National University of Computer and Emerging Sciences, Islamabad, with a strong passion for building intelligent, efficient, and impactful technology solutions. I have a solid foundation in software development, embedded systems, and algorithmic problem-solving, and I continuously explore emerging fields such as AI, robotics, ML, and high-performance computing.

My technical experience spans C, C++, C#, Java, Python, JavaScript, Assembly x86, and SQL, with hands-on work in Java Swing application development, .NET systems, embedded control design, and network simulation using Cisco Packet Tracer. I have developed projects including a full-scale Travel Ease System, a custom lightweight version control system (Git Lite), synchronized robotic cars using Arduino and Python, and numerical computing solutions based on the HPCG benchmark and SpMV optimization.

Academically, I have worked extensively on Design and Analysis of Algorithms, implementing advanced data structures such as Heaps, Treaps, and Merkle Trees. My coursework in robotics, numerical computing, and embedded systems has strengthened my interest in AI/ML, deep learning, computer vision, and performance-driven computing. I am a proactive learner who enjoys solving complex problems, building real-world systems, and contributing to innovative, interdisciplinary projects.

👤 Member 3

Name: Muhammad Atyab
Role(s): Tester, UI Design, Developer
GitHub Username: Atyab-1191

Picture:

Professional Biography (50 words):
I am a passionate Computer Science student with a strong drive to explore and master emerging tools and technologies. Specializing in web development and Python development, I build efficient, scalable, and user-focused solutions. I am committed to continuous learning, problem-solving, and delivering high-quality results in dynamic, fast-paced professional environments.

4. Team Agreement

The team has mutually agreed upon the following working guidelines:

5.1 Communication Methods

The team will use the following communication channels:

- WhatsApp Group – for daily communication
- Email – for formal communication and file sharing
- Phone Calls – for urgent matters
- GitHub – for code collaboration
- Trello – for sprint management

5.2 Communication Response Time

- WhatsApp: Within 2 hours
- Email: Within 24 hours
- Phone Calls: Immediate if urgent
- GitHub comments: Within 24 hours

All members are expected to respond within the agreed time frame.

5.3 Meeting Attendance

- Weekly meeting every Thursady and Saturday(if necessary)
- All meetings are mandatory.
- Absence must be communicated in advance.
- More than two unexcused absences will be discussed as a team issue.

5.4 Running Meetings

- Meetings will be conducted [Face-to-face / Online via Google Meet].
- Duration: 1–2 hours.
- Scrum Master will lead the meeting.
- One designated member will take meeting minutes.
- Meeting minutes will be shared on WhatsApp and stored in shared folder.

5.5 Meeting Preparation

All members must:

- Review assigned tasks before meeting.
- Prepare progress updates.
- Bring questions or issues to discuss.
- Review sprint backlog before sprint meetings.

5.6 Version Control Policy

The team will use GitHub for version control.

What to Commit:

- Source code files (.java)
- Documentation files
- Diagrams
- README file

What NOT to Commit:

- Compiled files (.class)
- IDE-specific files
- Temporary files
- Env files

Commit Message Rules:

- Must be meaningful and descriptive.
- Example:
    - “Implemented book request approval feature”
    - “Fixed fine calculation bug”

Generic messages like “update” are not allowed.

5.7 Division of Work

Work will be divided based on:

- Individual skill sets
- Availability
- Complexity of task

The Scrum Master and Product Owner will assign tasks during sprint planning and skills plus abilities will be considered while assigning. All members are responsible for helping each other if someone faces difficulty.

Identified Stakeholders

- Developers

- Course Instructor
- Librarians
- Library Administrator
- University Management

5.8 Submitting Assignments

- Final draft will be completed a day before deadline.
- All members will review the document.
- Team Lead will submit the final version.
- Screenshots and documentation must be verified before submission.

5.9 Contingency Planning

If a Team Member Drops the Course:

- Remaining members will redistribute responsibilities equally.
- Instructor will be informed immediately.

If a Member Consistently Misses Meetings:

- Issue will be discussed privately first.
- If behavior continues, responsibilities may be reduced.
- Instructor may be notified if necessary.

If Academic Dishonesty Occurs:

- The team does not tolerate plagiarism or cheating.
- Any suspected dishonesty will be discussed.

- The instructor will be informed if confirmed.

All team members agree to follow the above guidelines and responsibilities to ensure the successful completion of the project.
