M. Rohaan 221-2327 Sec-E Activity

Functional Recquirements of PSIMS:-

* **FIR Registration:-**
The system should allow police staff to register FIRs electronically instead of using paper-based registers.
* **Criminal Record Management:-**
The system should store and maintain criminal records, so they can be accessed when required.
* **Evidence Log Management:-**
The system should store and ~~maintain criminal~~ track evidence related to different cases.
* **Administrative Report Generation:-**
The system should allow police personnel to generate administrative reports based on stored data.
* **Record Storage and Retrival:-**
The system should store police records in a computerized system and allow users to retrive them when needed.
* **Record Updating:-**
Authorized Users should be able to update or modify records when changes occur.
* **System Testing and Verification Support:-**
The should allow individual components to be

tested and then combined with other parts of the system.

Non-Functional Requirements:-

* Product Requirement:-

- **Data Reliability and Safety:-**

The system should prevent data loss, incorrect record updates and system failures, since it handle sensitive and legally significant information.

* Organizational Requirement:-

- **Controlled Development and Evaluation:-**

The system should be developed with careful planning, controlled execution and ongoing evaluation throughout the development process.

* External Requirement:-

- **Legal and Policy Compliance:-**

The system must follow existing police rules, legal documentation formats and reporting requirements.
